MUSCLE CONDITION

Recorded 18 Oct 2026

Overall **Check**

Gluteal muscles over the wings of the ilia: Mild muscle loss
Temporal muscles: Normal muscle mass
Scapular muscles (supraspinatus, infraspinatus): Normal muscle mass
Epaxial muscles (lumbar): Normal muscle mass

(WSAVA MCS sites and grades, owner-palpated)

ORAL HEALTH

Recorded 05 Nov 2026 · brushed 07 Nov 2026

Overall **Check**

Halitosis on close examination
Mild marginal calculus
Soft plaque, brushes away
MM pink

Conscious examination by the owner, no probing or radiographs.

LABORATORY RESULTS · 25 SEP 2026

15 analytes, 15 shown

Vet's note · Dr. Sarah Whitfield, Maple Grove Veterinary Clinic: Three-month bloods on oclacitinib (Apoquel) for atopic dermatitis, ahead of the annual check; Angiostrongylus antigen added as he swims in and drinks from ponds. ALKP mildly raised and lymphocytes just below range against the pre-treatment baseline, consistent with oclacitinib; no clinical signs, treatment unchanged. Recheck in three months, sooner if lethargic, off food or any infection.

ANALYTE	RESULT	PREVIOUS · 15 JUN 2026	CHANGE	REFERENCE
ALKP	**258 U/L**	196	+32%	23-212
